

A1
The present invention concerns an apparatus comprising a circuit having one or more inputs. The inputs may be configured to provide a device identification (ID) of one or more different device IDs. The one or more inputs may allow implementation of the circuit with one of the one or more different device IDs.

Please replace the paragraph beginning at page 17, line 1 with the following paragraph:

A2
An apparatus comprising a circuit having one or more inputs. The one or more inputs may be configured to provide a device identification (ID) of one or more different device IDs. The one or more inputs may allow implementation of the circuit with one of the one or more different device IDs.
